Supplementary Information:						
A combination of voltmeter, VA and ammeter IA may be used instead of a wattmeter.						
If a separate voltmeter and ammeter are used, the product of (VA x IA) is used to determine Resistive PIS classification.						
A Resistive PIS: (a) dissipates more than 15 W, measured after 30 s of normal operation, <u>or</u> (b) under single fault conditions has either a power exceeding 100 W measured immediately after the introduction of the fault if electronic circuits, regulators or PTC devices are used, or has an available power exceeding 15 W measured 30 s after introduction of the fault.
